

# ID FORUM PROGRAMME

*"An event dedicated to digital identity"*

## 1. PLENARY SESSIONS

TITLE	CONTENT
<p style="text-align: center;">Tuesday 7 September 2021 9.30am to 11.30am</p> <p style="text-align: center;"><b>Digital identity in France: how should it be deployed in the face of the explosion in usage?</b></p>	<p><i>As the current health crisis made the use of digital tools more necessary than ever, the launch of a new French electronic identity (eID) card and the adoption of France-Connect by tens of millions of French citizens offer new prospects for digital identity. How will the government react to the eID becoming widespread, the launch of a Digital Identity Management System ('SGIN'), and the first European notifications? Will its reactions measure up to the challenge posed by the health crisis? In France, what are the other initiatives aimed at the general public? For what uses and with what experiences for the users?</i></p>
<p style="text-align: center;">Tuesday 7 September 2021 4.00pm to 6.00pm</p> <p style="text-align: center;"><b>European Digital Identity: a new framework, for what impact?</b></p>	<p><i>By announcing a digital decade (2020–2030), the European Commission wanted to commit to building a post-Covid society firmly anchored in digital services. At the heart of this transformation is the ambitious proposal to revise the eIDAS* Regulation to create a new "European Digital Identity Framework". What are the real goals of this proposed regulation? What is its place in the European digital strategy? On what global vision of the digital society and economy is it based? How will it interact with the DMA, with the new AML Regulation, or with the project for a new European digital health space? Can this regulation organise a European ecosystem of digital uses? What are the sovereignty impacts between the EU and its Member States? In this European plenary session we will also discuss the main content of the proposed regulation: What will it change compared to eIDAS? What are the main novelties? What are the consequences for regulated and non-regulated private services? How will the mobile portfolio of identity documents and certified attributes be built? What are the uses that will require qualified providers?</i></p> <p><small>* Draft regulation No 2021/0136 amending Regulation (EU) No 910/2014 as regards establishing a framework for a European Digital Identity</small></p>

## 2. ROUNDTABLE SESSIONS

TITLE	CONTENT
<p>Tuesday 7 September 2021 12.00pm to 1.00pm</p> <p><b>Digital identity to revolutionise healthcare</b></p>	<p>At the heart of developing a more preventive and individualised medicine, and in a renewed health context, digital identity is working towards a health revolution in France. The launch of "Mon Espace Santé" (My Healthcare Space) and the recent ordinance on electronic identification in healthcare have sanctioned the widespread use of secure messaging, the long-awaited success of the shared medical record, and the dizzying take-off of teleconsultation. This roundtable will take stock of authentication solutions in the healthcare sector: opening of the directory of health professionals; rollout of the e-CPS and the Carte Vitale app; widespread use of INS and of practices to monitor identity, simplify pre-admission and care journeys, and authenticate in the healthcare sector. It will also enable participants to discover new management and care services made possible by digital identity.</p>
<p>Tuesday 7 September 2021 2.30 to 3.30pm</p> <p><b>From health passport to identity documents: is the future in mobile documents?</b></p>	<p>Following the establishment of "health passes" and certificates in the form of 2-D codes, we are witnessing an explosion of official identity documents on mobile phones in Europe and around the world. A new generation of mobile driving licences and digital travel documents (DTCs) is being introduced. The European Digital Identity Wallet (EDIWA) project is also a reflection of this trend. This roundtable opens the debate on the uses and developments of mobile documents. What is their security and vulnerability compared to physical documents? Are they derivatives, companions, or alternatives? Do they have specific uses? What are the digital safeguards for certified or derived data? Which new strategies should be adopted for the introduction of public and private documents? What are the feedback and recommendations?</p>
<p>Wednesday 8 September 2021 2.00pm to 3.30pm</p> <p><b>Banks and Fintechs: a move towards full integration of the KYC approach, strong authentication, and payment?</b></p>	<p>The synergies between KYC and authentication and payment are progressing in seamless journeys. The alliance between banks and fintechs offers new opportunities to the market in terms of full KYC onboarding and of synergies for commercial optimisation of customer journey and risk management. This roundtable is an opportunity to understand the key questions: What are the avenues opened up by the rise of electronic KYC to optimise the customer journey? How will KYC, strong authentication, and payment be more integrated (or not)? What are the new customer experiences? What are the key innovations in KYC, authentication, and payment? How do new forms of payment (A2A, RTP, Instant Payment, APIs...) impact KYC and authentication? What are the sectoral specificities: banking, e-commerce, digital assets?</p>

<p>Thursday 9 September 2021 11.00am to 12.30pm</p> <p><b>What alternative models for identity?</b></p>	<p>As the digital economy and society progress, several new identity models are now emerging and being explored. This roundtable examines in particular identity models decentralised on the blockchain (SSI, DID, VC). How do the so-called self-sovereign identity and verifiable attributes work? For which uses? What are the constraints and potentials? What are the feedback and developments in progress? Is there an adoption model for these recently deployed technologies? What are the prospects?</p>
<p>Thursday 9 September 2021 2.00pm to 3.30pm</p> <p><b>New AML Regulation and Remote Identification: should we outsource?</b></p>	<p>With the health crisis, remote identification is becoming more widespread beyond financial services and digital platforms. What are the challenges of electronic KYC and remote identity verification? What are the risks, compliance requirements, and new standards that apply? What are the possible outsourcing strategies? In the light of the latest EU AML and EDIF (eIDAS revision) regulation proposals, this roundtable addresses the key topic of KYC outsourcing. What are the advantages and disadvantages? What do service providers specialising in facial recognition and life detection bring to the table? What is the speed of change and the regulatory, technical, and operational complexity? What data sources should be used or pooled? What is the feedback from outsourcing experiences?</p>
